

Excel Underground was founded in 2007 to fulfill the growing needs of quality service in the utility locating industry. Although the company itself is young, I brought with me, over twenty years of locating experience in Telecommunications, CATV, Electric, Natural Gas, Traffic Signals, Water, Steam, Sanitary and Storm. I have located for over fifty different Utility Companies and Municipalities in four different states. Over the years I have also completed hundreds of private locates in both residential and commercial areas.

I have also established many professional relationships over the years with utility representatives, excavators, engineers, surveyors and others in the industry. This provides the solid foundation of Excel Underground. Our quality service, professional integrity and commitment to our customers and employees are constant building blocks upon this foundation. I invite you to use our services and see for yourself that all locating companies are not created equal.

Are Your Private Underground Lines Safe?

This is a photo of a typical Diggers Hotline Request. In the photo you can see a white stake which is where a sign will be installed. The paint and flags are markings from the utilities who have responded to a Diggers Hotline call. In this case, there are markings for sewer, natural gas and communications.

There is a private parking lot at this location. If there are any private electric lines running through the area to feed parking lot lights or business signs they will not be marked by the utilities and are in danger of being damaged. This is where we come in. We can mark your private lines for you thus avoiding the inconvenience and cost of repairs to your damaged facilities.

Q: *What is a private facility?*

A: A private facility is a facility that is not owned by a utility or other member of Diggers Hotline; they are owned by homeowners or private businesses who are not required to be members of Diggers Hotline and will not be notified of your intent to dig. As a result, these lines will not be marked after a locate request is processed. Examples of private facilities include propane, electric, gas and/or communication facilities owned by a business or homeowner. These may include electric lines from a house to a garage or parking lot lights among other things.

It is the excavator's duty to notify the owners of private facilities of their intent to dig.
